

Optically Coupled Isolator / High-Speed Optically Coupled Isolator

OPI150, OPI153, OPI155

Features:

- 50 kV electrical isolation
- Choice of phototransistor or photodarlington output
- High speed >5 MBd (OPI155)
- Hermetically sealed LED and photosensor
- Base contact lead for conventional transistor biasing
- TX and TXV process available (see Hi-Rel section)

Description:

Each **OPI150** and **OPI153** is an optically coupled isolator that contains an infrared emitting diode and a NPN silicon phototransistor (OPI150) or photodarlington (OPI153), each sealed in an individual hermetically sealed package. The diode and phototransistor or diode and photodarlington are then optically coupled by means of a light pipe and mounted in a high dielectric plastic housing. These devices are designed for applications that require very high isolation between input and output.

The **OPI155** is a high-speed optical coupled isolator that contains a high speed monolithic photo-IC comprised of a photodiode and a DC amplifier that drives an open collector output Schottky transistor. It is optically coupled by means of an internal light pipe. The LED and sensor are both in separate hermetically sealed packages that are then mounted in a high dielectric plastic housing. This device is designed for applications that require high speed and high voltage isolation between the input and output.

TX and TXV devices are available. Please contact your local representative or OPTEK for more information.

Applications:

- Requiring high voltage isolation between input and output
- Electrical isolation in dirty environments
- Industrial equipment
- Medical equipment
- Office equipment

Output Voltage	-0.5 to 18 V
Output Current	25 mA
Open-Collector Power Dissipation	40 mW
Power Dissipation ⁽⁵⁾	250 mW

Notes:

- (1) For OPI150 and OPI153, measured with input leads and output leads shorted.
- (2) For OPI155, measured with input and output leads shorted and relative humidity of less than 50%.
- (3) RMA flux is recommended. Duration can be extended to 10 seconds maximum when flow soldering.
- (4) Derate linearly 3.33 mW/° C above 25° C.
- (5) Derate linearly 4.17 mW/° C above 25° C.
